

Unicode hex input

go to unicode.org to find the character and code you want (look for the 'character code charts')—or consult the Greek pages that follow in this .pdf

on Mac OS X:

1. activate the 'Unicode Hex Input' keyboard in **International in System Preferences** (if you don't know how to do this, see the 'Working with accented text (Apple Macintosh)' leaflet available from the University Computing Service: www.cam.ac.uk/cs/docs/lang/l30/l30.pdf)
2. depress option (or alt) and enter the code (while holding the key down)

in Word for Windows (unclear which versions):

1. type in the code
2. press alt + X

for 'Combining Diacritical Marks' (e.g. sublinear dot = 0323): position the cursor next to the letter you want (i.e. to the right), then do a hex input

be sure the font you have chosen supports the character you want: for Greek, Gentium seems to support most characters—not all fonts can handle all the characters

for instructions on how to download and install Gentium: <http://scripts.sil.org/Gentium>
